

Virtual Cruise

Virtual Cruise is an educational project for skippers. We are virtually sailing from Italy to Holland. One of the legs was a race on SailOnline.org. This platform allows us to practice sailing in changing weather conditions and to utilize polar diagram in practice.

The polar diagrams are very important for optimizing sailing performance and use of them is a valuable experience for participants of the race.

The competition between participants encourages them to be more involved in all aspects of sailracing.

We greatly enjoy the SailOnline.org platform.
