

Estonia I really like.

As a teenager, I have many times in the summer traveled to the Baltic countries. Nostalgic feelings were one of the reasons to go to start this adventurous race.

Why adventurous? Because the start and two changes of tack in light winds for 25 nm. Plenty of BBQ. QtVIm does not help for small distances and weak winds. (There must be a lot of clever mathematical words about weather analysis. About all sorts of first and second derivatives etc. but these words I do not know :))

After analyzing the weather, I found the "key" to the first part of the race. Between the first and second tacks to pass as close to the middle of the narrow strip of fading wind. The deviation from the right course greatly reduced boat speed. And so it happened. Or nearly so. After receiving the fresh weather, (approximately 02.06 11:15) it became clear that the plan was a success. Very good position. From this position you need to win.

And then I tried not to get too close Franci fend for themselves and keep it in a safe position. The distance between us for the rest of the race was 0.1 - 0.3 nm. And do not make a BBQ.

Thank you to everyone who participated in this very exciting race.
Thanks to the staff SailOnLine.org and Tuule_Tallaja for their excellent work !

I hope for a good tradition, you check my mistakes. :)
