

I thought everything would be easier. But no. In the polar to add rowers. Great idea! I really liked it. But router decided otherwise. Calculate the approximate path, he agreed, but on route optimization flatly refused.

And not just a router. New polar identifies weaknesses in my navigation apps like rengen.

Well, it's back to manual calculations. And everything was fine, at least up to the Shetland Islands. Between Shetland and the Faroe Islands, I made global error. Circumvent the Faroe Islands in the south was a big mistake. Very big.

After one Wx I could only look on as the group headed outlaw, increasing its advantage.

But the interesting thing started around 06:00 2016/04/30. A series of turns and maneuvers of the entire group outlaw-aner59-DIKKEHENK-rumskib-rafa-kenza, allowed kenza to take a very good position to fight for second or third place.

Then it all got a little surprise. Boat kenza wins. But in my opinion, the winner of this race outlaw.

What can we say in conclusion? SailOnLine - beautiful simulator yachting competitions.

Here in one race you can experience a range of feelings for: happiness, surprise, sadness, a sense of tragedy, sorrow, anger ... or in a different order :)

Thanks to all who prepared and gave us an opportunity to get pleasure from participating in this race!

kenza /May 2016
