

Ba -Rio was always a fascinating race.

Participants introduce themselves at the start more and more fit and prepared.

The first part of the race I decided to carry it out in DC ... and 'impossible to always keep pc every wx and especially at night! Therefore, after leaving in Ocean now the gap to the front had become important, but with my war robots are able to recover because some Solers have preferred to sail along the coast does not require that the polar have very abnormal behavior. When I was able to play at full speed, I looked for a recovery of Outlaw who now seemed the first without problems.

In the day following the ascent to NE has agreed with those who had preferred this route, and to the surprise Knockando60 found himself in front of Outlaw and their detachment was impossible to retrieve.

Nothing remained but to try to get on the podium and with Dingo and Rumsikib the task was very difficult. I tried to put the dc that would allow me to go back to the finish line taking much consideration Dingo in the meantime had come up a lot and is also able to overtake in the standings. But my crew with an enormous effort has struggled all the way managing to get the deserved podium.

Good result behind two very good Solers as Outlaw and Knockando60 that deserves a big round of applause (great Whisky!!!). In this way, in just 3 months of shooting game for me, with this result I have been able to return to the top ten ranking of the SYC and I am very happy to find myself in the elite of the best Solers !!

The year 2017 I do not know what in store, perhaps some specific races ??? It's too early to tell!

Thanks to all the participants and the organization.

The Franci ☺
