

Sailonline's Tall Ships Racing 2021 – Race 1 – Klaipedu to Turku

It's always a good fun to race with this big ships, and this time it wasn't different.

At the start, an east route seemed to me the best option, and to get full advantage of the shift, a lot of gybes were waiting ahead of us. After many of them, my boat was in a very good position to get a win.

I followed the routes from rotung software that kept me in a middle way, with boats doing more east, and others more west, an option that finally paid off and set in front of me one boat (1 hour ahead), just one but enough to loose what I looked for .

Congratulations limesinferior for an impressive performance
