

Cross the Convergence 2026 - Cocos to Sagar Island

Thanks everyone; after about 13 years of racing, it was probably time I won one. I admit I've never spent much time calculating routes, and that was the case this time too. I confess I owe much of this success to QtVlm's calculations, with just a few small tweaks from me. It surprised even me that the group of top racers fell behind—a stroke of luck that worked in my favor—but it's great to win.

Thanks again.
